

SSP585 weather-host decomposition: 2071-2100 versus 1991-2020

Modeled flag-leaf symptom timing

Upper-three-leaf HAD proxy loss

Disease weather (Shapley)

Host development (Shapley)

Total change

Interaction (full term)

Timing shift relative to anthesis (days)

Change (days per nominal upper-three LAI)

Gray segments: three-GCM ranges; colored bars: ± 1 spatial Monte Carlo SE.
Weather and host Shapley terms sum to total. Interaction is split equally between them and shown separately.
